

February 7–11, 2005

JIN Data Exchange (JINDEX)

We met with IT staff from King County to discuss the data elements to be provided by the Court and Criminal History (CACH) query, and with representatives from AOC, DIS, King and Yakima Counties to develop the XML schemas and the compatibility of the Global Justice XML Data Model “Rap Sheet” to the effort at hand. I should have draft schemas, as well as the first edition of the *Baseline Requirements Report*, to distribute for review and comment next week.

We are also tentatively scheduled to meet with Microsoft representatives next Wednesday to further refine the hardware and software requirements for JINDEX, and with AOC staff to discuss the contents of the web service they will be contributing to the effort.

Summary Offender Profile (SOP)

Templar’s connectivity problems with the production server continue. AOC has assigned a database administrator to help with the situation, and Templar has provided some SQL queries for validation.

On a more positive note, we have reached agreement on the sale of the SOP source code and the staff training to be provided as part of the handover.

Electronic Citations

The Senate Judiciary Committee held a hearing on [SB 5627](#) on February 9. The Committee was very supportive, thanks in part to strong testimony in support from WASPC, the DMCJA and the WTSC. The Defense Bar proposed language to further emphasize the defendant’s right to an identification hearing, and we hope to be in agreement before the hearing on the companion bill, [HB 1650](#), which is scheduled for Tuesday February 15 at 1:30. The only opposition to the bill was from the Association of Washington Cities, whose representative expressed a wish to make signature collection optional.
